SoftSide®

The First Five Years

A Catalog and Index

to all SoftSide Programs, Reviews and Articles
for the Apple, Atari, IBM and TRS-80 Computers.

From Our Publisher

October 1, 1983

Dear SoftSide Reader,

Many of you have asked us for particular articles from past issues. Until now, finding them has been difficult. To help you locate articles and order back issues, we present the first edition of the ***SoftSide Index and Catalog*** — a handy reference guide you will want to keep. It lists all the articles, reviews, and programs in each issue of ***SoftSide, Appleseed,*** and ***Prog-80,*** from our beginnings in October, 1978 through the end of our fifth year, Issue #45. The Index cross-references all entries, listing them by category, system, and author. Our stock of back issues is nearing depletion, so order early to avoid disappointment.

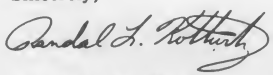
If you are a recent subscriber, you'll find a wealth of useful information, programming tips, and tutorials — and if you've been with us for awhile, this is an excellent opportunity to plug the gaps in your personal library. In many ways, this *Index and Catalog* documents the early history of microcomputing. You'll find the names of several now-famous authors and programmers who had their first work published in ***SoftSide.*** These volumes provide a fascinating glimpse into the beginnings of personal computing.

The Catalog also presents some of our more recent products, including Spyder Webb's first book: "What Do You Think, Machine Head?" We had a lot of fun putting the book together, and we think you and your friends will enjoy this collection of Machine Head's pungent commentaries on the man/machine interface. Our pre-publication price of $4.95 ($1.00 off the regular price) will be good only until Nov. 15, 1983, so order a few extra copies now for Christmas gifts, and enjoy the early-bird 17% discount.

The ***Best of SoftSide*** is now entering its second printing, and we have introduced the Disk Versions for Apple, Atari, and TRS-80 Models I and III. This is an excellent introduction to the art of programming, as well as a lot of *just plain fun* for the whole family. We've gathered together our best games, adventures, utilities and applications programs from the past four years, and upgraded and debugged them to add to your enjoyment.

Diskitte is our newest product (available 1st Quarter, 1984). How would you like to buy a box of blank disks that thinks for itself? ***Diskitte*** offers you a complete filing, cataloging and labelling system for your disk library — plus an attractive storage box with a hinged lid, and free bonus software. In ***Diskitte 10***: The Starter System, you receive eight blank disks, plus the cataloging disk, and a disk of our most popular games such as "Hopper" and "Minigolf." ***Diskitte 20***: The Programmer System, includes all of the above, plus eight more blanks, our *MicroText Word Processor,* and our *Database Manager.* ***Diskitte 50***: The Family System has 45 blanks, all of the above accessories and software, and ***SoftSide's Personal/Family Finance Manager.*** The blank disks are the same high quality disks we use for ***SoftSide DV*** and in our own offices. They are individually tested and certified error-free, and guaranteed for five years.

Sincerely,



Randal L. Kottwitz,
Publisher/Editor-in-Chief

WHAT DO YOU THINK, MACHINE HEAD?

The First Printout **By Spyder Webb**

For years, the outrageous cartoonist Spyder Webb has entertained **SoftSide** readers with the antics of his animated personal computer, "Machine Head," and Machine Head's sidekicks, Pops and Chip. Machine Head never lets his owner, Pops, forget who's really in charge, and his acid remarks show a surprising understanding of human foibles — at least for a machine. Now the smugly complacent computer has a book all its own! **What Do You Think, Machine Head?** features 101 hilarious observations on the interface between man and machine. Follow Machine Head's adventures with Eleanor the cleaning lady, Chadnick the cat, Zarkov the whiz kid, and others. It's a book that every microcomputer user will love — and it makes a great Christmas gift!

The BEST of SoftSide®

In its first four years of publishing, **SoftSide** produced some of the finest microcomputer software generally available. **The Best of SoftSide** contains Games, Adventures, Simulations, Utility Programs, a Word Processor,a Database Manager, and other exciting software from the magazine. Three books, one each for the Apple, Atari, and TRS-80 microcomputers are packed with BASIC code from the best of the hundreds of programs we have published. Each program is complete, and includes valuable enhancements and improvements since it originally appeared.

SoftSide's official debugging utility, S.W.A.T (Strategic Weapon Against Typos), is included for each volume, with S.W.A.T. tables for each program.

But — if you don't want to spend the time punching in code on your computer, **The Best of SoftSide** is also available on disk! Every program from the book version is contained on the disk/s, although the operating instructions, documentation and supplementary material are available only in the book. A great time-saver, and an outstanding software bargain!

All the program listings have frequent descriptive comments, so you can understand what each section does. If you want to enhance the program, or add extra features, you'll know exactly where to insert your code. And if you want to learn programming techniques, **The Best of SoftSide** offers an excellent opportunity to analyze the structure of typical program types.

The Best of SoftSide in book version is designed for easy use at computer-side. It's spiral bound (like a steno book) to lie flat and stay open, printed on non-reflective paper to reduce eye fatigue, and just the right size to coordinate with the other manuals in your collection.

In **Diskitte 50 — The Family System,** you get all of the above, plus our **Personal Finance Manager,** to balance your checkbook and budget your money.

THE SOFTSIDE ADVENTURE SERIES...

The Adventure is Waiting for You!

Go boldly into the depths of space to brave the swirling vortex of a black hole...Plunge into the briny deep in search of sunken treasure...Rescue a fair princess from evil monsters...Escape from the sinking Titanic...all "in the comfort of your own home." **SoftSide's** Adventure Series (formerly the Adventure of the Month Club) provides the travel plans, and your micro is the vehicle to take you on quests to distant realms of imagination and excitement.

Originally sold as a subscriber series, limited editions of the Adventure Series cassettes and disks are still available at special low prices. Starting with issue number 38 (March 1983) of **SoftSide,** the Adventure Series was incorporated into the regular CV and DV as a bonus...so the great adventure continues!

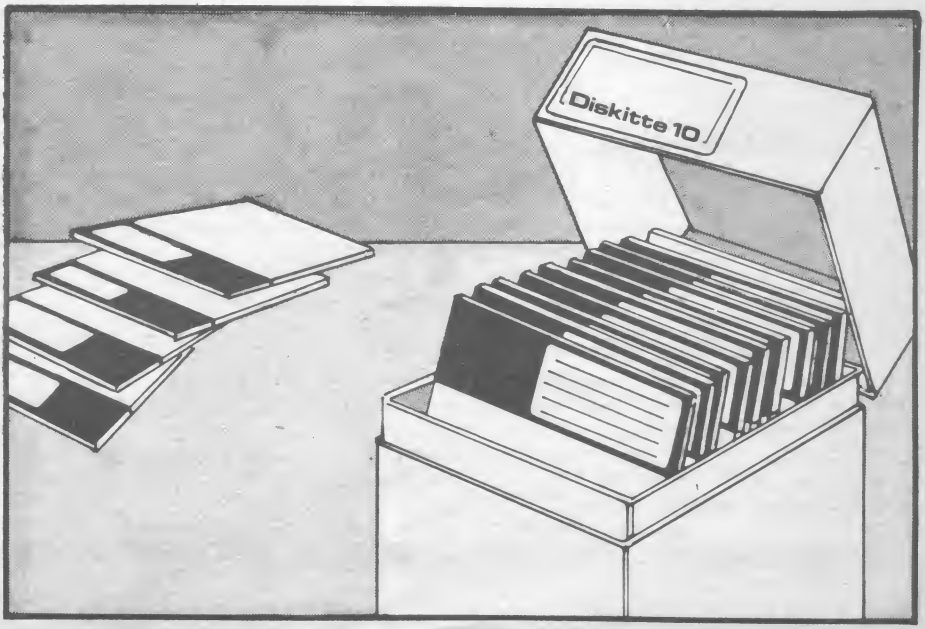
The disks are the same high quality disks we use for **SoftSide DV**. Custom-manufactured to our specifications, they are reliable, error-free, and certified. The coating is fine-particle, premium grade oxide, which is burnished to a uniform, polished surface, and then lubricated to minimize dropouts and head wear. The disks are inserted into precision-assembled PVC jackets, with a self-cleaning non-static liner. The center holes are punched with extreme accuracy to insure precise head tracking, and hub ring reinforcers are attached to insure long life. Stress relief notches in the jacket help to prevent creasing (a major form of disk damage). Each disk is individually tested and meets or exceeds all applicable ANSI standards. We know they're good, because we publish **SoftSide DV** on them, and we use them in our own offices.

End the nightmare of piles of disks scattered around your computer. Organize them, and put them all in one place — a handsome storage box with hinged lid. The **Disk Manager Software** provides a complete index of what's on every disk in your library, and prints out labels for each disk. And it's all free when you buy the **Diskitte Starter, Programmer,** or **Family System!**



Small Format — TRS-80

In October 1978, **SoftSide** began publication in a small format edition which, at that time, featured material strictly for the TRS-80® Model I. These early issues are now considered "collector's items" since they document the dawn of the microcomputer publishing industry, and are quickly diminishing in supply. Among the pioneering authors are programming superstars George Blank, John Voskuil, Lance Micklus, Peter Kirsch, and Roger Robitaille.

Small Format — Apple

As **SoftSide's** readership began to expand, and more personal computers appeared on the market, we began to include programs for the Apple® II computer in Integer BASIC and Applesoft™. In January, 1980, we launched a new small format magazine for the Apple. For only one issue, this was called **Appleseed.** Then the name was changed to **SoftSide,** Apple Edition, which was published simultaneously with the TRS-80 Edition for several months. In August, 1980, the two editions were consolidated into one publication in a larger format. Mark Pelczarski began his contributions in this period.

In August, 1980, **SoftSide** underwent a significant format change. Full-size pages, better quality paper, full color covers, more art work, and improved editorial content were among the upgrades. Coverage of the Atari® 400 and 800 was added. PROG/80 and the Apple and TRS-80 editions of **SoftSide** were consolidated into one publication. During this period, the extremely popular Adventures appeared, along with **SoftSide's** database, word processor and personal finance manager programs. Though not as sophisticated as some of the currently available packages, these programs provide an excellent opportunity for those who are learning programming to analyze their structure and typical subroutines. New contributors include Rich Bouchard, Alan J. Zett, Fred Condo and Kerry Shetline. Randal L. Kottwitz was appointed editor in September, 1981.
